# Create/Edit Polls

Create/Edit Polls allows a Pre/Post-Test to be created for comparative analysis, as well as Post-Tests for polling purposes if comparative analysis is not needed.
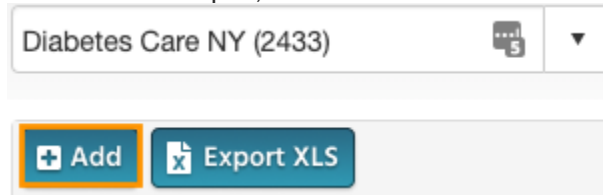

To access this screen, from the Main Menu, go to **Faculty > Create/Edit Polls**.

**1**. Enter an activity name in the activity drop-down box.

2. To create the poll, click the **+Add** button.

3. A new screen will display. On the **Course Properties** tab, enter the **Title** of the poll, select the **Activity**, select the **Session**, enter the **Author**, select a **Minimum Pass %** (default is set to 90%), and enter in a poll **Description**. Once completed, click the **Save** button.

4. To create a Pre-Test poll, click the **Pre-Test Polls** tab and then click the **Add Poll Question** button.

5. Enter the poll question in the WYSIWYG editor. (acronym for what you see is what you get)

6. If the Pre-Test poll will be graded, check the **Is this a graded poll?** button and then mark the correct answer selection. Once the poll question and answer selections have been entered, click the **Save** button.

7. Repeat this process until all Pre-Test poll questions have been entered. Once completed, click the **Post-Test Poll** tab and enter the Post-Test polling questions and answer choices following the same steps to create the Pre-Test poll.

If a Pre/Post-Test poll will not be created for comparative analysis, users are able to create a Post-Test poll only.
Once completed, the poll will display on the main screen. The poll may be viewed by clicking the title. Delete the poll by clicking **Delete**, edit the poll by clicking **Edit**, or export to an XLS file.

AUDIENCE RESPONSE ONLY THROUGH MOBILE APP

The **Audience Response** menu option allows attendees to respond to poll questions during a live activity.

1. Tap the **Audience Response section** to view a list of registered activities. Users who are not registered for the activity will not see the activity within the available poll list.

2. Tap the activity name, and the current poll will display. Graded poll questions must be answered to see the results. Non-graded poll questions can be left unanswered.

3. Tap the **Submit Response** button to see a live chart of poll results by poll question. When the Administrator displays the next poll question, the app will automatically display the new question to users.
